About Me

2 years of experience in VueJS. Former Web Developer Intern at Selise Digital Platforms Ltd. Currently employed as a Software Engineer at startups Afilo and Growth and Analytics. Specializes in MERN stack development. Likes to automate stuff and travel. Fascinated with both kinds of cloud.

Work Experience

Software Engineer, Growth & Analytics   *April 2023- ongoing*

-Designed and developed a seamless landing page for a growth and analytics company using VueJS, NextJS, Tailwind CSS, and Framer Motion. Also created campaigns and products to boost business growth.
-Handled various projects as an integration engineer to integrate analytics tools like Google Analytics, Segment, and Mixpanel into client websites.

Software Engineer, Afilo   *August 2023- ongoing*

-ReactJS, Tailwind CSS, and Redux specialist with experience leading the design and development of complex web applications.
 -Created various UI features and authentication in Marchant page

Software Engineer Intern, Selise Digital Platforms   *Feb 2023- ongoing*

-Expertise in synchronous and asynchronous JavaScript, MongoDB, Express.js, and Docker for streamlined web development and deployment. Proven ability to configure and manage VPS, Nginx, and other infrastructure services.
-Gained exposure to office culture and regular Scrum meetings.

Projects

Personal Porfolio Website
Designed and developed a portfolio website using Next.js, TailwindCSS, and Framer Motion, showcasing my skills and projects in a visually engaging and user-friendly manner.

Live : https://devfarhad.ninja

Ecommerce Project -1
Teamed up to develop Afilo's landing page and authentication system. Currently enhancing the merchant user interface with Tailwind CSS and Redux.

Live: https://afilo.io

Ecommerce Project -2
Designed and built a full-stack website with custom CMS using NextJS, NodeJS, and MongoDB for efficient content management and enhanced functionality.

Live: https://watchmans.vercel.app

Angular Project during Internship
Developed an Angular 11+ frontend and Node.js backend for a cloud-deployed project using MongoDB. Leveraged Angular Material for UI design and RxJS for component communication.
